- Selenium
- Appium
- TestCafe
- Postman
- JMeter
- K6
- React
- TypeScript
- Node.js
- Angular
- PostgreSQL
- Git
- Docker
- Rust
- Next.js

ABOUT ME

I'm a QA Automation Engineer with production experience testing web and mobile applications. I'm currently building toward a Full Stack Developer role, and I'm comfortable across the stack — from automated E2E/API testing to shipping React/TypeScript features and Rust systems projects on my own time. Second-year Systems Engineering student at UTN, open to QA Automation and Junior/Full Stack Developer roles.

WORK EXPERIENCE

● QA Automation Engineer

WestDigital (IT consultancy) — Merlo, Buenos Aires
Since August 2025

- Automation of E2E tests with Selenium, Appium, and TestCafe across web and mobile flows.
- API testing with Postman and performance/load testing with JMeter and K6.
- Analysis of functional requirements and design of test plans and test cases.
- Contribution to projects built with Angular, Node.js, and WordPress alongside the development team.

PERSONAL PROJECTS

● anvil-zk

Rust · gRPC · Docker — co-authored
2026

- Distributed zero-knowledge proof coordinator with hexagonal architecture and a typed job state machine.

● mini-blockchain

Rust · Tokio · Axum · libp2p — sole author
2026

- Blockchain node built from scratch: cryptographic core, REST API, and P2P networking.

● AI Interview Assistant

Tauri · React · Claude API · Whisper
2026

- Desktop app with real-time audio capture, transcription, and AI-assisted suggestions.

● notes-app

NestJS · React/Vite · PostgreSQL/Prisma
2026

- Full-stack TypeScript monorepo with type-safe queries and automated migrations.
